

## Pancreatic Cysts

The human body is a marvel of nature, a complex system that works in harmony to keep us healthy and active. However, sometimes things can go wrong, such as the development of pancreatic cysts. This article will explore what pancreatic cysts are, their types, how they are diagnosed, and the available treatment options.

### What are Pancreatic Cysts?

Pancreatic cysts are fluid-filled sacs on or in the pancreas, a large organ in the abdomen between the stomach and the intestines. The pancreas plays a crucial role in our body, producing hormones like insulin that control blood sugar levels and enzymes that help digest food. Most pancreatic cysts are discovered during imaging tests for other health issues, as they

often cause minimal or no symptoms. However, these cysts range from benign (non-cancerous) pseudocysts to malignant (cancerous and spreading) cysts.

### Types of Pancreatic Cysts

Several types of pancreatic cysts include pseudocysts, serous cystadenomas, Intraductal Papillary Mucinous Neoplasms (IPMNs), and mucinous cystic neoplasms.

Pseudocysts are the most common type of pancreatic cysts, often developing after an episode of pancreatitis (inflammation of the pancreas). They are non-cancerous and may resolve on their own without treatment.

Serous Cystadenomas: These are benign cysts filled with a watery fluid. They are typically harmless and rarely become cancerous.

Intraductal Papillary Mucinous Neoplasms (IPMNs): These cysts grow in the pancreatic ducts and can be benign, pre-cancerous, or cancerous. They produce mucus, and their size and location can help doctors determine if they are likely to become cancerous.

Mucinous Cystic Neoplasms are potentially cancerous cysts that often form in the body or tail of the pancreas, typically in women. They are filled with a thick, sticky fluid and have a distinct layer of ovarian-type tissue, which helps in their identification.

### Diagnosis of Pancreatic Cysts

Pancreatic cysts are typically diagnosed during imaging tests for other health problems. If a cyst is found, your doctor may recommend further tests to determine its type and whether it's cancerous. These tests may include an endoscopic ultrasound, where a thin tube with a camera and ultrasound device is passed down your throat to your stomach and small intestine, providing images of your pancreas.

### Treatment of Pancreatic Cysts

The treatment for pancreatic cysts depends on the type of cyst, its size, and whether it's causing symptoms. Some cysts, like pseudocysts and small serous cystadenomas, may not require treatment and can be monitored with regular imaging tests. However, IPMNs and mucinous cystic neoplasms may need to be surgically removed due to their potential to become cancerous. The type of surgery will depend on the size and location of the cyst. In some cases, a part of the pancreas may be removed, while in others, the entire pancreas may need to be removed.

**Conclusion** While the presence of a pancreatic cyst can be concerning, it's important to remember that not all cysts are cancerous, and even those with cancerous potential can be

effectively managed with regular monitoring and timely treatment. If you have been diagnosed with a pancreatic cyst, it's crucial to have regular check-ups and follow your doctor's advice.

## **Center For Digestive Health & Nutrition**

725 Cherrington Parkway • Moon Township, PA 15108  
412.262.1000 • [www.gihealth.com](http://www.gihealth.com) • IG: @thedigestivetract

The Center for Digestive Health & Nutrition is a private medical practice comprised of experienced Gastroenterologists, Nurse Practitioners, and staff members dedicated to preventing and treating digestive disorders. Our physicians have been serving the needs of those in Western Pennsylvania and surrounding areas since 1977, having cared for tens of thousands of individuals with digestive problems. Our mission is to deliver high-quality gastroenterology services efficiently and cost-consciously. We realize the very sensitive nature of GI illness and understand the necessity to provide our services in an environment that stresses patient privacy and confidentiality and where patient satisfaction is the goal. Appointments can be conveniently scheduled online via our website above. Learn more about digestive issues on Instagram @thedigestivetract
